

## **State of the Union Address President George W Bush**

**January 28, 2003**

“... In this century, the greatest environmental progress will come about not through endless lawsuits or command-and-control regulations, but through technology and innovation. Tonight I'm proposing \$1.2 billion in research funding so that America can lead the world in developing clean, hydrogen-powered automobiles. (Applause.)

A single chemical reaction between hydrogen and oxygen generates energy, which can be used to power a car -- producing only water, not exhaust fumes. With a new national commitment, our scientists and engineers will overcome obstacles to taking these cars from laboratory to showroom, so that the first car driven by a child born today could be powered by hydrogen, and pollution-free. (Applause.)

Join me in this important innovation to make our air significantly cleaner, and our country much less dependent on foreign sources of energy. (Applause.)...”
